Results of the Examinations of the Schools of Art, 1866.

THE works of the various Schools of Art in connexion with the Science and Art Department have now been sent up, and examined for the first time since the changes in the regulations consequent on the recommendations of the Parliamentary Committee on Schools of Art in 1864.

Under these regulations payments were authorized of 10s. or 15s. on every artizan student who sends up a satisfactory year's work, and of 10s. on every exercise of the 2nd grade worked at the annual examination by an artizan student. The total amount of these payments is not ascertained, many of the schools not having yet made their claims.

It will be seen by reference to Table A, page 5, that there is a very great discrepancy between the numbers of students borne upon the books of the schools and the numbers of students whose works have been sent up for examination. This arises, I believe, in part from want of system, or attention, on the part of the committees or masters in the collection of students' works, and in part from the difficulty of inducing the students to leave their finished works in the schools. In the first case, the remedy is in the hands of the committee whose interest is concerned in the amount of the payments; in the second, it may be suggested that those students who are unwilling to present themselves for examination, or leave their works for transmission to London, should be required to pay a higher fee for their instruction than those who are willing to comply with the conditions necessary to enable the Committee to obtain the aid of the Department.

Under the regulations in force from 1857 to 1865, when a course of 23 stages of instruction was prescribed to Schools of Art, works (of which the maximum size was $29\frac{1}{2}$ in. by $21\frac{1}{2}$ in.), from selected examples, were submitted by each school to the art-inspectors of the Department, who awarded what were termed local medals to the most meritorious of the works examined, and who selected from the works so distinguished the best in each stage for reference to the national competition. The number of local medals awarded to any one school was limited, not exceeding 30 as a whole, or three in any one of the stages of instruction.

In the national competition 100 medallions were competed for by works in 19 stages of the course. Four stages were excluded, either as being tested by personal examination, or as being not sufficiently important to enter into this competition for the highest distinction awarded to students. The subjects tested by examination were, freehand time-drawing in outline, practical geometry, perspective, and time drawing from models. The prizes given to candidates in their examinations were styled of the 2nd grade. The first grade is the course of instruction in parochial or other schools for the poor.

Under present regulations, the examinations of the 2nd grade continue to be held as before, except that instead of being conducted by officers of the Department, they are now conducted by local committees, who refer the exercises worked by candidates to the Department for ex-

amination. The numbers examined and successful are given in Table A., page 5.

The local medal has been abolished; but each school is now required to send up all the works of students on account of whose instruction payment is claimed, or who compete for prizes. No subjects or particular sizes are prescribed for competition, nor is the size of works limited, except in the case of models; but the course of instruction is divided into two parts.

Section B., which includes drawing from flat examples, mechanical or architectural drawing; drawing from geometric models, objects of general utility or casts of ornament; drawing flowers and foliage from nature.

Section C, which includes works in drawing, painting, modelling, or designing for manufactures and decoration, belonging to classes not included in the 2nd grade, or in section B. These works are all submitted to the art-inspectors, who award prizes (which are not limited in number, except by the standard of excellence required) to meritorious works in section B. These prizes are styled of the 3rd grade. From the works in section C (to which they do not award prizes), the art-inspectors select those which enter into the national competition under the conditions stated in the report of the examiners of the national competition, page 8.

The number of students on the books of each school in December last, the number of students who sent up works in competition, the number of medals and prizes in the national competition, and the number of 3rd grade prizes in each school, are given in table A.

H. A. BOWLER,

Official Inspector for Art.

NOTE.—The Gold Medal is of the value of 16*l.*, and students have the option of receiving a silver parcel-gilt medal and books on Art of a value equal to the difference in cost, or that difference in money.

The "Third Grade" Prizes consist of books, and are awarded to works which are not of the stages eligible for national competition. They are awarded previous to the national competition, and not by the same examiners.

Report of the Examiners on the Works sent from the Schools of Art and selected for the National Competition at South Kensington.

MAY 1866.

SINCE the last competition the conditions under which awards are made have been changed. They are now as follows:—

The best works in drawing, painting, modelling, or designing for manufactures and decoration enter into competition for medals of gold, silver, or bronze, and for prizes of books, &c.

10 Gold medals were offered for—

- 1st. The best study from the antique, in chalk, monochrome, or modelled.
- 2nd. The best example of painting a group of still life, from nature, in oil or water colour.
- 3rd. The best study of the figure from life, in colour, chalk, or modelled.
- 4th. The best designs in the three classes of architectural, surface, and plastic design; six medals.
- 5th. A work of a class not included under the above-named heads.

Twenty silver and 50 bronze medals, and prizes of books, works of art, &c., were assigned in the above-named classes or for other meritorious works.

Of 968 works submitted to us, 110 drawings and 15 models were from the antique. The gold medal was awarded to a student who had produced two successful drawings, one of which was complete in its modelling, and vigorous in its rendering of the action of the figure of the Gladiator; the other, a cartoon, full sized, of the Discobolus of Naucydes, though weaker in its drawing, well expressed the ease and suppleness of the original.

We awarded the gold medal, for a study from the life, to the producer of a model of a male figure, who also obtained a gold medal, in the class of design, for a series of heads of a decorative character, one modelled, on a large scale, in terra-cotta, which were so boldly designed and showed so much facility in execution as to call for special approbation.

Some difficulty was felt in making these awards, from the fact that drawings and models in each of the two sections, studies from the life and studies from the antique, competed for the same medal, and we would suggest that this condition should be altered, one gold medal being offered for the best study from the antique in chalk or monochrome, and one for the best model from the antique. If necessary, the gold medal might be withdrawn from the studies from the life, a section in which few of the schools are able to compete. Students capable of using the living model would still be able to compete for the highest distinction by applying the figure as an element of decorative design, with which view its study is admitted into the schools.

Some of the studies from the life laboured under a disadvantage in the competition, owing to the injudicious endeavour to obtain pictorial effect by the introduction of backgrounds, which, while not sufficient to constitute satisfactory compositions is, as a study of light and dark, not required in this stage, in which the student should aim at precise drawing and clearly defined form.

In the class of applied design a large number of works were submitted to us bearing more or less directly on the special manufactures of the districts in which they were produced. They gave evidence as a whole of a sound inculcation of the principles which govern this class of Art. It is still, however, necessary to point out that a merely symmetrical arrangement of forms naturally treated does not wholly fulfil the requirements of those principles. They demand such conventionalities of treatment in every design as shall specially adapt it for application to a particular material, and subordinate it to the form or space for which it is prepared. Six gold medals were awarded, and we hope that this encouragement may stimulate students to still more earnest and ambitious endeavours in this section, to which all the other studies of the schools are made to tend, and that the promise held out in the large number of drawings from the antique submitted this year may be fulfilled by the application of the figure to those important designs of which it may properly form an element.

We have marked the value we attach to the study of flowers and foliage as an introduction to design, or as a source of suggestions for ornamental forms, by the award of a gold medal to some studies of flowers, and one of silver to a sheet of drawings showing the analysis of flowers, a mode of study we are specially desirous of seeing more fully represented.
